Re: Digital, AI and Innovation Internship: Global Call for 2026 (Job ID 33001)

Dear Hiring Team,

I am an M.Sc. student in the Management of Technology at the Institute of Appropriate Technology, BUET, and I am applying for the Digital, AI and Innovation Internship. I would like to contribute mainly to Product Design, Build, and Management, and to Research and Knowledge Management.

My strongest fit is in building digital products for people who are often left out of them. As a UI/UX designer at Seed of Intelligence, I designed the user flows and interface for an AI-powered video platform. Since then I have worked on the ScabieSense project at IAT, BUET, a mobile app for scabies detection, treatment guidance, and outbreak mapping. Doctors are now using it to screen students in madrasas, our primary target group. Seeing a tool move from a design into daily clinical use taught me how much depends on user testing, clear requirements, and close work with the people who will use the product.

My thesis, supervised by Dr. Tahsina Farah Sanam, builds an IoT and LLM-based system that recognizes Bangla Sign Language through a wearable glove. That work has given me practical experience with AI tools, sensor data, and the questions of access and responsible use that come with them. I have also co-authored a gait recognition paper submitted to ICECE 2026, so I am used to desk research, structured writing, and turning technical findings into clear summaries. The coursework in my master's program on technology policy, planning, and impact assessment adds a policy view to this technical background.

I work carefully, meet deadlines, and am comfortable both independently and in a team, including on multiple tasks at once. I would be glad to support the Hub's work with Country Offices and to learn from it. My CV is attached.

Thank you for your consideration.

Sincerely,
A. S. M. Samiul Islam
